General algebra, more specifically non-commutative algebra, is poised for major advances in the twenty-first century (together with and in interaction with combinatorics), just as topology, analysis, and probability experienced in the twentieth century. This is the second volume of Algebras, Rings and Modules: Non-commutative Algebras and Rings by M. Hazewinkel and N. Gubareni, a continuation stressing the more important recent results on advanced topics of the structural theory of ...

This volume is a continuation and an in-depth study, stressing the non-commutative nature of the first two volumes of Algebras, Rings and Modules by M. Hazewinkel, N. Gubareni, and V. V. Kirichenko. It is largely independent of the other volumes. The relevant constructions and results from earlier volumes have been presented in this volume.

Let  $\Gamma$  be a ring with unit. If  $A$  is a left  $\Gamma$ -module, the dimension of  $A$  (notation:  $l.\dim \Gamma A$ ) is defined to be the least integer  $n$  for which there exists an exact sequence.  $0 \rightarrow X_n \rightarrow \dots \rightarrow X_0 \rightarrow A \rightarrow 0$ , where the left  $\Gamma$ -modules  $X_0, \dots, X_n$  are projective. If no such sequence exists for any  $n$ , then  $l.\dim \Gamma A = \infty$ .

Algebras, Rings and Modules: Lie Algebras and Hopf Algebras

As a natural continuation of the first volume of Algebras, Rings and Modules, this book provides both the classical aspects of the theory of groups and their representations as well as a general introduction to the modern theory of representations including the representations of quivers and finite partially ordered sets and their applications to finite dimensional algebras.
