Antibiotic Resistance Map

- Antibiotics' penetration of biofilms may be improved by adding DNase with the antibiotic.
- Bacteria in biofilms tend to be more antibiotic sensitive.
- Antibiotic-impregnated biomaterials that are inserted into the body prevent biofilm development on those materials.

Since antibiotic resistance is the result of natural selection for resistance-conferring mutations, it is important to understand the evolutionary processes underlying this selection. One interesting element to this puzzle is that bacteria acquire resistance to different antibiotics at different rates.

Download Free Antibiotic Resistance Concept Map

Antimicrobial resistance occurs naturally but is facilitated by the inappropriate use of medicines, for example using antibiotics for viral infections such as cold or flu, or sharing antibiotics. Low-quality medicines, wrong prescriptions and poor infection prevention and control also encourage the development and spread of drug resistance.

Antimicrobial resistance - World Health Organization

Antimicrobial resistance (AMR or AR) occurs when microbes evolve mechanisms that protect them from the effects of antimicrobials. The term antibiotic resistance (AR or ABR) is a subset of AMR, as it applies to bacteria that become resistant to antibiotics. Resistant microbes are more difficult to treat, requiring higher
