The text describes the main features of currently available heat pumps, focusing on system operation and interactions with external heat sources. In fact, before choosing a heat pump, several aspects must be assessed in detail: the actual climate of the installation site, the building's energy

requirements, the heating system, the type of operation etc. After discussing the general working principles, the book describes the main components of compression machines – for EHPs, GHPs and CO2 heat pumps. It then addresses absorption heat pumps and provides additional details on the behavior of two-fluid mixtures. The book presents a performance comparison for the different types, helping designers choose the right one for their needs, and discusses the main refrigerants. Notes on helpful additional literature, websites and videos, also concerning relevant European regulations,

improve. Inflation peaked in December 2010, and is now likely to decline. Financial market stress has remained relatively low in recent months. The current account deficit improved from 131¼2 percent of GDP in 2007 to about 41¼4 percent of GDP in 2010, driven by a strong shrinking trade deficit. Significant progress has been made under the Stand-By Arrangement (SBA) in achieving fiscal consolidation and safeguarding the financial sector. Most performance criteria and structural benchmarks were met throughout the program.

Embodied and Whole Life Carbon will change the way buildings are designed, yet carbon emissions associated with the construction and life of buildings are not yet wholly understood by the profession. Energy is assumed to be the province of services engineers, yet energy from materials is as big an issue. Architects have the opportunity

Advanced District Heating and Cooling (DHC) Systems presents the latest information on the topic, providing valuable information on the distribution of centrally generated heat or cold energy to buildings, usually in the form of space heating, cooling, and hot water. As DHC systems are more efficient and less polluting than individual domestic or commercial heating and cooling systems, the

book provides an introduction to DHC, including its potential contribution to reducing carbon dioxide emissions, then reviews thermal energy generation for DHC, including fossil fuel-based technologies, those based on renewables, and surplus heat valorization. Final sections address methods to improve the efficiency of DHC. Gives a comprehensive overview of DHC systems and the technologies and energy resources utilized within these systems Analyzes the various methods used for harnessing energy to apply to DHC systems Ideal resource for those interested in district cooling, teleheating,

Although Japanese universities have relied on information technology to resolve numerous problems, their high expectations are undermined by lags in implementing that technology. This innovative edited volume argues that lags in IT implementation in Japanese education are created by

contradictory and challenging responses of the social environment. If this dialectic can be visualized as having hands, the right avidly promotes IT, while the left hand simultaneously blocks it. The result, of course, is an impasse. The issues central to this stalemate are significant because they point beyond the schools, to a broader set of problem areas in Japanese society. The contributors to Roadblocks on the Information Highway discover and discuss the contradictions inherent in Japanese society and culture as they are played out in the social contexts of IT service providers, web

masters, and classroom teachers who implement IT. They then show how these contradictions indicate broader, structural problems that pervade the dynamic between Japanese education and the state and business sectors. Ultimately, in a reach that goes beyond Japan, this book examines relationships between technology and society, persuasively convincing readers that the modern age has created an inextricable link between the two.
