For artists and art students in all media -- in both fine and applied arts.

This book is the result of a unique collaboration between an artist who has taught basic design and an experienced professional writer of college textbooks. Together we have tried to create a book that prepares a solid foundation for studying all the fine and applied arts and is at the same time readable, interesting, and clear.

The Art of Seeing explores traditional and contemporary art and artistic media focusing on art as seen from the artist's point of view. The book introduces students to artistic techniques and introductory aesthetic principles. It provides clear, concise presentation, superb illustrations, and strong emphasis on the elements and

media.

Introduces the principles of three-dimensional design and sculpture, discussing such applications as kinetic art, conceptual work, computer-aided sculpture, and installation pieces.

This best-selling exploration of traditional and contemporary art and artistic media focuses on art as seen from the artist's point of view, treating artistic techniques and introductory aesthetic principles. It is an engaging, clear, and concise presentation with a multi-cultural emphasis. The careful design of the illustrations, text, headings, timelines, and boxes enhances the relationship between text and illustrations. The book has a four-part organization--Part I lays the foundation for seeing; Parts II and III views two-and three-dimensional art; and Part IV approaches art as it exists in time. Topics cover a broad range of media and traditional and contemporary art, including installation; video and performance art; encaustic; fresco; wood engraving; earthworks; computers and art.

This title aims to increase awareness of the importance of colour as a powerful design tool in print. Used properly, colour selections and combinations can be employed to create numerous visual effects to add entire new dimensions to a designer's work.

In order to use this tool effectively, colour itself, its selection, and organisation must be understood. This book, with its inspiring content, stimulating design, and approachable format, provides the reader with everything he or she needs to know. Computer technology has revolutionised the work of graphic designers and Systematic/Subjective Colour Selection specifically addresses them. It covers the fundamentals of colour, its choice and interrelationships, the differences between the colour we see in print and on our screens, and how to mix colour in contemporary vector-based computer programs. This guide will give designers of all nationalities a comprehensive understanding of how to choose effective colour schemes for the eye, not the individual. This book is innovatively bound to encompass two-in-one, complete with a detachable colour wheel for the reader to use when choosing future designs.

Offers an introduction to the art and the science of color and its uses. Zelanski provides a foundation in the aesthetic and practical basics of this all-pervasive subject, with many quotations from artists past and present on the subtleties of their techniques. The material on new technologies has been reorganized and updated so that pigment mixtures are now explored before

light mixtures. --From publisher description.

An invaluable introduction to the art and science of colour and its uses. The book not only provides a solid and thorough foundation in the aesthetic and practical basics of colour, but it also gives insights into the creative use of colour by artists present and past. The text is accompanied by illustrations from both the fine and applied arts, with examples ranging from Old Masters paintings to contemporary design and craft objects, there is also an explanation of colour technologies in computer graphics and a discussion of the complexities of colour management.
