This series Science Success is meant for Pre-primary and Classes 1 to 8. It fulfills the vision of National Curriculum Framework (NCF) is meant for the schools affiliated to CBSE and other schools affiliated to various State Educa[ti]on Boards. This series emphasizes meaningful learning of science for the overall development of learners. It focuses on helping children understand their natural environment and correlate science with their everyday experiences in an interest[ing] and comprehensive manner. The text has been designed with beautiful illustrations to help children develop skills of observation, investigation, and scientific attitude. Goyal Brothers Prakashan

This book presents recent developments in the areas of engineering and technology, focusing on experimental, numerical, and theoretical approaches. In the first part, the emphasis is on the emerging area of electromobility and its sub-disciplines, e.g. battery development, improved efficiency due to new designs and materials, and intelligent control approaches. In turn, the book's second part addresses the broader topic of energy conversion and generation based on classical (petrol engines) and more modern approaches (e.g. turbines). The third and last part addresses quality control and boosting engineering efficiency in a broader sense. Topics covered include e.g. modern contactless screening methods and related image processing.

With the advent of approximation algorithms for NP-hard combinatorial optimization problems, several techniques from exact optimization such as the primal-dual method have proven their staying power and versatility. This book describes a simple and powerful method that is iterative in essence and similarly useful in a variety of settings for exact and approximate optimization. The authors highlight the commonality and uses of this method to prove a variety of classical polyhedral results on matchings, trees, matroids and flows. The presentation style is elementary enough to be accessible to anyone with exposure to basic linear algebra and graph theory, making the book suitable for introductory courses in combinatorial optimization at the upper undergraduate and beginning graduate levels. Discussions of advanced applications illustrate their potential for future application in research in approximation algorithms.

Extensive research conducted by the Hasso Plattner Design Thinking Research Program at Stanford University in Palo Alto, California, USA, and the Hasso Plattner Institute in Potsdam, Germany, has yielded valuable insights on why and how design thinking works. Researchers have identified metrics, developed models, and conducted studies, which are featured in this book, and in the previous volumes of this series. Offering readers a closer look at design thinking, and its innovation processes and methods, this volume covers topics ranging from understanding success factors of design thinking to exploring the potential that lies in the use of digital technologies. Furthermore, readers learn how special-purpose design thinking can be used to solve thorny problems in complex fields, such as the health sector or software development. Thinking and devising innovations are inherently human activities – so is design thinking. Accordingly, design thinking is not merely the result of special courses or of being gifted or trained: it is a way of dealing with our environment and improving techniques, technologies and life. As such, the research outcomes compiled in this book should increase knowledge and provide inspiration to all seeking to drive innovation – be they experienced design thinkers or newcomers.

Computer has firmly carved its place in the human society. Computer makes our job easier and has reshaped our imagination. The world of technology and computer systems is continuously evolving and has touched virtually each and every aspect of our lives. The Computer Science Success series is based on Windows 10 and Office 2016. This series is specially designed for providing a vast theoretical and practical knowledge of computers to the students. It is the most comprehensive series in which activity and tool-based approach is incorporated. Each chapter in the book begins with an engaging introduction followed by an activity-based approach to learning, which is supported with ample number of diagrams, pictures and relevant screenshots. The exercises in each chapter have sufficient practical and activity-based questions. Lots of interesting software like Office 2016 (like Word, Excel and PowerPoint) and MSWLogo have been taught in these books. Internet is also covered. Core features of Computer Science Success series (for Classes 3 to 5) are: [] Learning Objectives: Describes the goals required to be achieved by the end of the chapter. [] Chapter Contents: Concepts are explained to strengthen the knowledge base of the students. [] Know More: Gives extra and useful information on the topic being covered. [] Fact: Includes historical facts about the topic being covered. [] Top Tips: Gives a shortcut method of the topic being covered. [] Activity: Encourages the students to explore some real life use of the topic being covered. [] Summary: Gives a brief summary of the topics being taught in the chapter. [] Exercises: Includes a variety of questions to evaluate the theoretical knowledge of the students. [] Activity Zone: Includes the following activities: v Puzzle: Includes crossword or mazes to focus on some important terms included in the chapter. v Lab Session: Gives instructions to the students to perform various tasks in the lab. v Group Discussion: Encourages the students to have discussion on various topics. v Project Work: Assigns various tasks to the students to apply the concepts already learnt. [] Teacher's Notes: Gives suggestions to the teachers to make the learning process better. [] Periodic Tests: A total of four periodic tests are included to evaluate the knowledge of the students. [] Model Test Papers: Two Model Test Papers, covering questions from all the chapters are included in the middle and towards the end of the book. [] Project Work: A set of projects has been designed to challenge the students to apply the concepts learnt. [] Cyber Olympiad: Gives a sample Cyber Olympiad question paper to test the knowledge of the students. [] Practice Assignments(in a separate section): Includes both Practice Assignments and Quizzes, that helps the students to understand the topics given in the chapter thoroughly.
