Graphing Translations of Simple Rational Functions To graph a rational function of the form $y = \frac{a}{x - h} + k$, follow these steps: Step 1 Draw the asymptotes $x = h$ and $y = k$. Step 2 Plot points to the left and to the right of the vertical asymptote. Step 3 Draw the two branches of the hyperbola so that they pass through the plotted points and approach the

The Graphing Rational Functions Worksheet can answer questions such as; which element contains that element. Or which elements are closely related to each other in relation to the periodic table. It can answer questions such as these because it allows you to enter your ideas directly onto the chart itself.

Recall from Section 1.2 that an even function is symmetric with respect to the y-axis, and an odd function is symmetric with respect to the origin. This can sometimes save time in graphing rational functions. If a function is even or odd, then half of the function can be graphed, and the rest can be graphed using symmetry.
