Lorentz Dispersion Model Spectroscopic ellipsometry (SE) is a
technique based on the measurement of the relative phase change of
reflected and polarized light in order to characterize thin film
optical functions and other properties. The measured data are used to
describe a model where each layer refers to a given ma-
terial.

Lorentz Dispersion Model - Horiba

The classical dispersion model is based on the sum of the single and
double Lorentz, and Drude oscillators. • Lorentz dispersion model The
Lorentz classical theory (1878) is based on the classi-
cal theory of

interaction between light and matter and is used to describe frequency dependent polarization due to bound charge.

Classical Dispersion Model - HORIBA

Theoretical model Jellison and Modine developed this model (1996) using the Tauc joint density of states and the Lorentz oscillator. The complex dielectric function is : Here the imaginary part ϵ_i , TLo of the dielectric function is given by the product of imaginary part of Tauc's (1966) dielectric ϵ_i , Tfunction with Lorentz one ϵ_i , L.

Note that the technical notes «Classical dispersion model» and «Lorentz dispersion model» are complementary to this one. Theoretical model Drude's model (1900) is based on the kinetic theory of electrons in a metal which assumes that the material has motionless positive ions and a non-interacting electron gas. This simple model uses classical mechanical theory of free electron. It was ...

Theoretical Model. Equation of Cauchy Transparent. The earliest dispersion formula was established by Cauchy (1836) who set up simple empirical dispersion law. The "Cauchy Transparent" dispersion works best when the material has no optical absorption in the visible spectral range and consequently generally has a normal dispersion which ...
