share exactly the points $(0, 0)$ and $(1/2, 1/2)$. If (x, y) lies on both circles, $x + y = c$, which yields $x = c - y$. Setting $x = c - y$ on the equation $x^2 + y^2 = 1/4$ yields $(c - y)^2 + y^2 = 1/4$. The solutions of this are $x = 0$ and $x = 1/2$, which yields $(0, 0)$ and $(1/2, 1/2)$ as the points of intersection. b) The parameter c is restricted as given in order to permit solutions.

Mathematical Induction is a method of proof commonly used for statements involving N , subsets of N such as odd natural numbers, Z , etc. Below we only state the basic method of induction. It can be modified to prove a statement for any $n \in N$, where $N \subseteq Z$. 3. Theorem 4.1 (Mathematical Induction). Let $P(n)$ be a statement for each

by someone else to give a proof. Hence, providing a solutions manual would negate a necessary aspect of the course. In addition, a solutions manual would be of very little help in verifying the correctness of a proof, since there are many different ways to prove almost any given statement, all equally correct.
