Living With Complexity. Don Norman, 2011. If only today's technology were simpler! It's the universal lament, but it's wrong. We don't want simplicity. Simple tools are not up to the task. The world is complex; our tools need to match that complexity. Simplicity turns out to be more complex than we thought. In this provocative and informative book, Don Norman writes that the complexity of our technology must mirror the complexity and richness of our lives.

Living With Complexity: Book by Don Norman

Managing complexity, says Norman, is a partnership. Designers have to produce things that tame complexity. But we too have to do our part: we have to take the time to learn the structure and practice the skills. This is how we mastered reading and writing, driving a car, and playing sports, and this is how we can master our complex tools.

In Living with Complexity, Donald A. Norman explains that complexity is all in the mind. Our perception of a product or service as simple or complex has its basis in the conceptual model we have of it. Norman writes that "A conceptual model is the underlying belief structure held by a person about how something works..."

This is a pattern in Living with Complexity: Norman presents mind-numbingly simple examples about a problem (e.g., the Disneyland "fast pass" when it comes to waiting in line) and then lines his credo with obvious statements (e.g. design ought to be human-oriented, simple things can be made complicated, it's important that people perceive fairness in how they are treated).
