Internal Parasite (Endoparasite) Diagnosis in Livestock: Fresh fecal samples from livestock should be collected from pasture or, preferably, per rectum using plastic gloves. Samples should be placed in a properly identified, sealed specimen jar. A representative number of herd samples should be collected from a minimum of 10 animals to account for the typical high individual variation in numbers of eggs shed.

**Veterinary Parasitology—Journal—Elsevier**

Parasitology. Parasitology is the study of parasites, their hosts, and the relationship between them. Every free-living species has its own unique species of parasite - humans included - such that the number of parasitic species greatly exceeds the number of free-living species. Parasites in humans result in millions of deaths each year throughout the world, but particularly in the developing world.

**Parasitology — Department of Pathology**

Veterinary parasitology is the study of animal parasites, especially relationships between parasites and animal hosts.Parasites of domestic animals, (livestock and pet animals), as well as wildlife animals are considered. Veterinary parasitologists study the genesis and development of parasitoses in animal hosts, as well as the taxonomy and systematics of parasites, including the morphology ...
