Abstract. Programmable Logic Controller (PLC) is extensively used in industries for controlling sequence of actions of the process since last two decades. Hence we have decided to develop PLC based sequential batch process control system of our laboratory. The sequence of process flow is decided for controlling the parameters like level and temperature.

PLC-based process controller is a process control system which has the base of SYSMAC SC/CJ series. It can be adopted for both loop control which controls analog signals and sequence control which mainly handles contacts. By combining a loop controller and process I/O units, loop control functionality can be added onto the PLC, maintaining the basic PLC function.

PLC-based Process Control The over-spec nature of a distributed control system (DCS) increased costs. PLCs, however, could not provide the required process control capabilities, and signal conversion with isolators and other devices was required for I/O. It was just not possible to achieve the ideal system for a specific application.
