A red car and a green car, identical except for the colour, move toward each other in adjacent lanes and parallel to an x-axis. At time $t = 0$, the red car is at $X_r = 0$ and the green car is at $X_g = 220$ m. If the red car has a constant velocity of 20 km/h, the cars pass each other at $x = 44.5$ m, and if it has a constant velocity of 40 km/h, they ...

Ford, Ultimate Green. The second generation of Focus RS was a ground-breaking car for a number of reasons (not least because of its revolutionary 'RevoKunckle' front differential), but if you were to ask the average man or woman on the street what they remembered most about the car, they'd probably mention the colour first.

If your car came from the factory with Dexcool®, use Dexcool® for replacement or to top off. If your car came from the factory with standard "green" antifreeze, use that for replacement or to topping off. Case in point, Dexcool® has been known to cause head gasket and water pump failure on some Ford OHC V-8's.

Thankfully in Britain unlike in USA a red car doesn't attract any attention of the wrong kind or even insurance loading, in USA most companies where the car is red or black would charge a higher premium if you're a younger driver. It also tends to attract the attention of the police where they think you'll be more likely to commit an offence.
