This book treats some of the central problems involved in these networks of the future.

First, how does one switch data at speeds orders of magnitude faster than that of existing networks? This problem has roots in both classical switching for telephony and in switching for packet networks. There are a number of new

Packet switching is suitable for handling bilateral traffic. In Circuit switching, charge depend on time and distance, not on traffic in the network.

In Packet switching, charge is based on the number of bytes and connection time.
