So, let's look at backhaul, midhaul, and fronthaul as one. After all, it's all the means to an end. They are all needed to get the data where it has to go, both ways. No matter what the link, it is part of the solution. It takes planning. All I am asking is that you need to be open-minded. We often look at fiber as the only solution, but ...

Higher-speed optics (above 25Gb/s) will also be needed in 5G networks Over the past 12-18 months, LightCounting has heard repeatedly about mobile operators requesting optical transceivers with speeds of 50, 100, and even 400 Gb/s for 'fronthaul' or 'backhaul'. Why such high speeds would be needed has been a real puzzle to figure out.

**Mobile fronthaul in the 5G era+OFDC**

LTE is a major change in the evolution of mobile network architectures from two key aspects. Firstly, LTE represents the final stage in the evolution from circuit/packet hybrid networks to a fully IP-based packet network, and secondly LTE also transitions from the legacy hierarchical network architecture to a flat and distributed architecture thanks to the incorporation of the RNC in the eNodeB.
