Fully integrated into the titanium casebody, the lugs of the Ultra Deep are left open to lower the risk of exceeding material limitations at full ocean depth, as both the watch and the strap can be subjected to high traction loads. They are called "Manta" lugs due to their distinctive look. The use of grade 5 titanium

Deepwater is considered to be anything more than midwater (4000/5000 ft or 1219/1524 meters) but not ultra-deep. The top end of deepwater comes in at around 7000 feet (2133 meters). Just like the shallow water definition creep over time, there was a time when even depths of 1000 feet (305 meters) were considered to be deepwater.
