Push technology is an internet communication system in which the transaction request is generated by the central web server or publisher. Push technology is the opposite of pull technology, where the information transmission request is made by the clients or receivers. This phenomenon is used to describe the preplanned news, weather or other selected information that is updated on a periodic basis on user's desktop interface.

## **What is Push Technology? - Definition from Techopedia**

Push technology, or server push, is a style of Internet-based communication where the request for a given transaction is initiated by the publisher or central server. It is contrasted with pull /get, where the request for the transmission of information is initiated by the receiver or client . Push services are often based on information preferences expressed in advance.
