The contemporary world lives on the data produced at an unprecedented speed through social networks and the internet of things (IoT). Data has been called the new global currency, and its rise is transforming entire industries, providing a wealth of opportunities. Applied data science research is necessary to derive useful information from big data for the effective and efficient utilization to solve real-world problems. A broad analytical set allied with strong business logic is fundamental in today's corporations. Organizations work to obtain competitive advantage by analyzing the data produced within and outside their organizational limits to support their decision-making processes. This book aims to provide an overview of the concepts, tools, and techniques behind the fields of data science and artificial intelligence (AI) applied to business and industries. The Handbook of Research on Applied Data Science and Artificial Intelligence in Business and Industry discusses all stages of data science to AI and their application to real problems across industries—from science and engineering to academia and commerce. This book brings together practice and science to build successful data solutions, showing how to uncover hidden patterns and leverage them to improve all aspects of business performance by making sense of data from both web and offline environments. Covering topics including applied AI, consumer behavior analytics, and machine learning, this text is essential for data scientists, IT specialists, managers, executives, software and computer engineers, researchers, practitioners, academicians, and students.

Socioscientific issues require individuals to use moral and ethical considerations to help in their evaluation of evidence and decision making, entailing controversial scientific phenomena. Such issues include genetic engineering and biotechnology. Socioscientific issues pedagogy has the potential to enhance students' overall conceptual understanding of scientific phenomena that affect the daily lives of people across the globe. Socioscientific Issues-Based Instruction for Scientific Literacy Development is a critical scholarly publication that examines the development of a research-based integrated socioscientific issues pedagogy for use in the K-12 system, teacher education preparation, and informal education centers. The publication focuses on science education researchers and pre-service and in-service teachers' abilities to design and implement meaningful learning opportunities for students to use rationalistic, intuitive, and emotive perspectives as they engage in information reasoning on scientific topics, such as climate change and CRISPR, that are of utmost importance. Teachers in the K-12 system and informal education settings will be able to use this text to enhance scientific literacy among their students. Instructors in teacher preparation programs will be able to use this research-based text to improve pre-service and in-service teachers' abilities to use socioscientific issues pedagogy to enhance scientific literacy among K-12 students. Additionally, audiences including researchers, administrators, academicians, policymakers, and students will find this book beneficial for their studies.

The application of holistic optimization methods in the tourism, travel, and hospitality industry has improved customer service and business strategies within the field. By utilizing new technologies and optimization techniques, it is becoming easier to troubleshoot problematic areas within the travel industry. The Handbook of Research on Holistic Optimization Techniques in the Hospitality, Tourism, and Travel Industry features innovative technologies being utilized in the management of hotels and tourist attractions. Highlighting empirical research on the optimization of the travel and hospitality industry through the use of algorithms and information technology, this book is a critical reference source for managers, decision makers, executives, tourists, agents, researchers, economists, and hotel staff members.

Retail Service Quality is a vital driver in determining customer satisfaction, which in turn promotes customer loyalty and reduces switching intentions. Service quality is a solution to build customer satisfaction which could lead to customer loyalty hence reducing switching intentions. The current study has investigated the interrelationship between service quality, customer satisfaction, customer loyalty with switching intentions of customers, and the moderating role of price discounts and store ethnicity, in a single framework. Random sampling was used by administering standardized questionnaires personally to 450 hypermarket customers located in the Eastern Province of Saudi Arabia. The results confirmed that retail service quality has significant positive influence on customer satisfaction, and the positive effect of customer satisfaction on customer loyalty. Besides, the study verified store ethnicity and price discounts acted as moderating mechanism for explaining the switching intentions of satisfied and loyal customers. The results serve as a guideline for top managers of the hypermarkets to design appropriate policies and strategies in terms of retail service quality, price discounts and identifying the needs of ethnic groups in a particular region. This will help to enhance customer satisfaction and customer loyalty hence reducing switching intentions of customers.

Innovative methodological approaches are vital for experienced researchers and early-career researchers alike to conduct research. In order to provide them with the best possible resources, the methodologies must be comprehensive and describe the data sources, approaches to data collection, and approaches to data analysis that are typically employed within the given methodological approach. *Methodological Innovations in Research and Academic Writing* serves as a resource for graduate students and higher education faculty and presents a number of methodological innovations in research as well as applied examples of these methodologies in practice. The chapters focus on the application of methodological approaches (through the presentation of real-world examples) and descriptions of the epistemological foundations of the given methodologies so that researchers can fully articulate and justify their methodological choices in the context of their research design. It is a crucial guide for graduate students who are designing and writing their doctoral dissertations as it introduces them to the best practices related to rigorous research design and academic writing. This book is ideal for graduate students, higher education faculty, researchers, and academicians.

Agricultural entrepreneurs in conflict and post-conflict regions face special challenges; not just everyday personal risks, but also the difficulties of building small businesses when real or threatened violence can disrupt business growth cycles and economic security. Alongside establishing secure institutions, building a secure economy is rightly seen as the best way for conflict-torn regions to establish a peaceful future. But current agricultural entrepreneurship training and development starts from an assumption of peace, meaning that it is not always fit for purpose. The result is sub-optimal program design and inefficient use of resources. A product of a collaboration of experts in the fields of agri-business, agricultural marketing, and international development, this book gives officials and agencies developing entrepreneurship programs the practical real-life examples they need.

Building an effective, inclusive, and accountable public administration has become a major point of attention for policymakers and academics in Ethiopia who want to realise sustainable development. This first handbook on Ethiopian Public Administration is written by Ethiopian academics and practitioner-academics and builds on PhD studies and conference papers, including studies presented at the meetings of the Ethiopian Public Administration Association (EPAA), established in 2016. *Public Administration in Ethiopia* presents a wide range of timely issues in four thematic parts: Governance, Human Resources, Performance and Quality, and Governance of Policies. Each of the individual chapters in this volume contributes in a different way to the overarching research questions: How can we describe and explain the contexts, the processes and the results of the post-1990 politico-administrative reforms in Ethiopia? And what are the implications for sustainable development? This book is essential for students, practitioners, and theorists interested in public administration, public policy, and sustainable development. Moreover, the volume is a valuable stepping stone for PA teaching and PA research in Ethiopia.

This book offers an interdisciplinary analysis of the experience of economic vulnerability among older adults. Drawing on various fields ranging from happiness, economics to stress research, it integrates assessments from objective and subjective measurement perspectives. The book offers nuanced insights into prevalent experiences of low economic quality of life in wealthy countries, using empirical data from Switzerland. A sample of some 1500 adults aged 65-84 is taken as the basis for a systematic comparison of the demographic and socioeconomic characteristics of three – overlapping – groups of potentially vulnerable pensioners: those who are income-poor (objective measure), those who report difficulties making ends meet (subjectively self-assessed measure) and those who worry about not having enough money for current expenses (subjectively perceived measure). Theoretical and empirical evidence is offered for the distinctiveness of the two subjective indicators, one of which assesses the experience of economic strain while the other captures the individual's response in terms of stress. The conceptual contribution of this research includes a typology of economic vulnerability: eight distinct profiles emerge at the intersection of the objective, self-assessed and perceived measures. These profiles correspond to specific risk constellations, and they reflect varying degrees of human agency in dealing with economic vulnerability.

"This book provides ESL/EFL teachers, TESOL teacher trainers, and in-service and preservice educators, with a collection of works illustrating current best practices in online CALL applications in TESOL, including works on emerging applications such as technology-enhanced learning in a variety of configurations, from fully online contexts to face-to-face blended learning contexts with some degree of a virtual component"--

The construction industry is amidst a digital transformation that is focused on addressing well-documented issues and calls for significant improvements and changes through increased productivity, whole-life value, client focus, reduction of waste, and being more sustainable. The key aspect to driving change and transformation is the education and upskilling of the required workforce towards developing the required capacities. Various approaches can be taken to embed digital construction within education and through collaborative efforts in order to drive change and facilitate improvements. *The Handbook of Research on Driving Transformational Change in the Digital Built Environment* focuses on current developments in practice and education towards facilitating transformation in the built environment. This book provides insight, from a practice perspective, in relation to the client's understanding, digitally enabled collaboration, interoperability and open standards, and maturity/capability. Covering topics that include digital transformation and construction, digitally enabled infrastructure, building information modelling, collaborative digital education, and the digital built environment, this book is an ideal reference source for engineers, professionals, and researchers in the field of digital transformation as well as doctoral scholars, doctoral researchers, professionals, and academicians.
